1. Introduction

The purpose of this document is to detail the Azure Cloud Billing and Subscriptions service according to ITILv3 standards.

It sets out:

- the key features of the service;
- responsibilities; and
- how you can use the service.

As with all services, we are at times dependent on you, as the Client, to take certain steps to enable us to properly provide this service. We have described, by way of a RACI matrix, how our responsibilities will be apportioned and what we require from you.

This is intended to help you to identify what we do and, perhaps just as importantly, what we don't do in respect of each service. If you believe any area of responsibility (whether on our behalf or yours) needs to be amended or updated, please contact us at <https://calligo.cloud/io>.

This Service Description is subject to change from time as time, as our services develop to meet our Client's needs. We will notify you in writing of such changes as they occur.

If a conflict exists between the terms of (a) our Master Services Agreement and/or standard terms and conditions and (b) this Service Description, the terms of the documents listed at (a) shall govern.

The Service Description forms part of the service design and is used to document the key elements of the service.

2. Service Information

Azure Cloud Billing and Subscriptions service is a solution for central management of all a client's Azure Cloud billing and subscriptions when taking Calligo's Azure Stack services. The service allows clients to have all billing handled by Calligo without having to worry about the management of the process. The Client can benefit from Calligo's pricing plans for Azure Cloud which may be more preferential.

2.1. Key Product Features

- Priced per number of subscriptions to be managed
- Single point of contact for all billing in both Azure Cloud and Calligo Azure Services
- Use of preferential Calligo Azure Cloud pricing against public Azure pricing
- Use of Calligo's enhanced Microsoft support contract for better SLA's
- Calligo managed subscription changes on behalf of Client

2.2. Locations of Service

The service is available in the following Calligo locations:

- Jersey
- Guernsey
- Bermuda
- Singapore
- Zurich
- Toronto
- Vancouver
- Luxembourg

2.3. Relation to other services

The service is dependent on the following services:

- CloudCore Azure
- CloudApp

2.4. Using the service

Clients can perform the following with the service:

- Request billing information
- Raise support tickets for Azure Cloud through Calligo service desk
- Request changes to their Azure Cloud subscriptions
- Request access / changes in access to the subscriptions

The Client's use of the service is based on the following assumptions; -

- That the Client will follow secure computing best practices

- Be responsible for any remedial work required to its own or third party applications and services, unless otherwise agreed with Calligo.

If the Client fails to meet those assumptions, Calligo will not be able to provide this service in the manner intended, if at all.

2.5. Requesting additional resource

Requests will require a service request ticket that will be actioned according to the Calligo Service Desk response times based upon priority of the request. The current Calligo Service Desk SLA's are published at <https://calligo.io/licences>.

2.6. Commercials

The latest prices per unit are available from our Account Management team and/or as contained in your SOW. ice Level

Service Availability target = 99.8% per calendar month. The service is available 24 hours 365 days a year.

If availability on a monthly basis falls below 99.8%, we will provide credits for the service affected as described below:

Monthly Uptime Percentage < 99.5%	Service Credit - 10% (of monthly charge)
Monthly Uptime Percentage < 99%	Service Credit - 25% (of monthly charge)

(For further information, please see our Service Level Agreement - <https://calligo.io/licences>)

2.7. Access to service

Clients can access the service by contacting the Calligo service desk via the methods outlined on the Calligo website www.calligo.io/contact.

2.8. Levels of Access

Clients using the service can have one or more of the following roles:

- User – Can request changes to the subscriptions and get reporting information
- Administrator – Can request new subscriptions to be managed and manage who can request changes to subscriptions

2.9. Responsibilities

The service has split responsibilities to deliver all functionality and the following responsibilities are defined for each party:

2.9.1. RACI Definitions

- Responsible - Those who do the work to achieve the task. There is at least one role with a participation type of responsible
- Accountable - The one ultimately answerable for the correct and thorough completion of the deliverable or task, and the one who delegates the work to those responsible. In other words, an accountable must sign off (approve) work that responsible provides. There must be only one accountable specified for each task or deliverable
- Consulted - Those whose opinions are sought, typically subject matter experts; and with whom there is two-way communication
- Informed - Those who are kept up-to-date on progress, often only on completion of the task or deliverable; and with whom there is just one-way communication

Matrix

Item	Responsible	Accountable	Consulted	Informed
Maintain a valid Azure Cloud Subscription	Client	Client		
Request existing CSP subscription be migrated to Calligo	Client	Client	Calligo	
Migrate existing EA subscription to Calligo	Client	Client	Calligo	
Migrate existing PAYG subscription to Calligo	Client	Client	Calligo	
Setup a valid Azure Cloud Subscription if none exists	Calligo	Calligo	Client	
Allow Calligo the rights to administer the subscription	Client	Client		
Request changes to subscriptions being managed	Client	Client		Calligo
Production of subscription billing invoices for managed subscriptions on Azure Cloud	Calligo	Calligo		Client
Payment of subscription invoices from Calligo	Client	Client		Calligo
Administration of access and usage of Azure Cloud resources / services	Client	Client		
Raising support tickets for issues with Azure Cloud via Calligo	Client	Client		Calligo
Management of support tickets raised with Microsoft support	Calligo	Calligo	Client	

2.10. Documentation and Training

There is no end user documentation for this service. No formal training is provided by Calligo for this service.

2.11. Standards and Policies

This service is compliant with the following compliance standards and policies up to the responsibility boundaries:

- ISO 9001

2.12. Backup and Restore

The service does not contain any client or configuration data.

2.13. Scheduled maintenance windows

The service does not require a maintenance window that affects the availability SLA.

2.14. Appendix A – Availability Table

Availability %	Downtime per month
90% ("one nine")	72 hours
95% ("one and a half nines")	36 hours
97%	21.6 hours
98%	14.4 hours
99% ("two nines")	7.20 hours
99.5% ("two and a half nines")	3.60 hours
99.8%	86.23 minutes
99.9% ("three nines")	43.8 minutes

2.15. Appendix B – Glossary

256bit AES – An encryption algorithm that keeps data secure. The larger the bit number the harder it is for the data to be decrypted without the key.

Active Directory Federation Services (ADFS) – A Microsoft Windows service to allow two domains to exchange authentication credentials via an encrypted connection over the internet.

Active Directory Synchronisation – A tool to copy user accounts from one domain to another and keep the passwords in synchronisation.

Application consistent – A point in data where the application that uses it will always see it as valid as opposed to crash consistent where the data may be incomplete.

DNS (Domain Name Service) – A computing service used to translate an IP address to a name. Used both for public domains such as www.xyz.com and private internal domains.

GB – Gigabyte of capacity, 1 GB = 1024 Megabytes.

Gold Build – Template from which other virtual machines can be provisioned from. Contains all the required OS and software pre-installed.

High Availability – A configuration that provides for the loss of components within a site and maintain the service that is being delivered without the need to recover from backup or switch to another site.

Infrastructure as a Service (IaaS) – A service that provides computing resources such as memory, CPU, networking and disk to allow for virtual machines to be hosted in a resource consumption based model.

Input Output Operations Per Second (IOPS) – A unit of measurement for disk storage performance.

ITILv3 – Version 3 of the Information Technology Information Library which is a collection of best practice processes and documents to manage an information technology company.

Multiprotocol Label Switching (MPLS) – A network connection for high performance networking over the internet that can use quality of service to provide better reliability.

MB – Megabyte of capacity, 1 MB = 1024 Kilobytes.

Multi-tenant – Shared service or resources to provide a commodity of scale service where users pay for a subset of the service or resources as is required by the user.

Platform – A grouping of technology and services that provide the overall service that is being delivered.

Platform as a Service (PaaS) – A service that provides tools to create computer applications without the need to run virtual machines that have operating systems (OS). The service is consumed on a resource consumption model.

Point-to-Point (P2P) – A private physical network connection between two locations not over the internet.

Protection Group – A group of virtual machines that are replicated together for consistency.

Public IP Address – A unique computerised address used in computer networks to define destinations for communication on the internet.

Recovery Time Objective (RTO) – The time in which a protected item can be made available for use after recovery.

Recovery Point Objective (RPO) – The point at which any protected item can be recovered to. This stipulates the potential amount of lost time or data.

Single sign-on – The use of a single credential to access multiple services or applications.

Software as a Service (SaaS) – A service that provides access to an application for use without access to any associated OS or infrastructure required to run that application. The service is consumed on a resource consumption model.

Solid State Disk (SSD) – A disk with no moving parts offering greater performance than traditional hard disk drives (HDD).

Storage Volumes – A logical partition of a storage system used to hold specific data.

TB – Terabyte of capacity, 1 TB = 1024 Gigabytes.

Two Factor Authentication (2FA) – The use of a secondary one time passcode in addition to a username and password to gain access to a service or application.

User Persona – Settings and data specific to a user's configuration of an operating system or application. Allows for these settings to be transferred between virtual machines.

Virtual datacentre (vDC) – A logical representation of a physical datacentre's resources such as CPU, Memory and Disk.

Virtual Desktop – A virtual representation of a physical desktop comprised of memory, CPU, network and disk. The virtual desktop runs an operating system and applications.

Virtual Machine (VM) – A virtual representation of a physical server or desktop comprised of memory, CPU, network and disk. The virtual machine runs an operating system and applications.

Virtual private network (VPN) – An encrypted network connection over the internet between two end points.
