6. Data Residency

[Calligo Data Residency](#)

7. Service Requirements

Service Item	Requirements Item
CO-ITSM-SD	Client is provided information on support access methods
CO-ITSM-SD	All Priority 1 incidents are logged, and the client must follow up with a telephone call into support.
CO-ITSM-BV	Full 'Microsoft 365 Voice' service item functionality requires one of the following license sets: <ul style="list-style-type: none"> Option 1 If your business has Microsoft 365 Business Basic/Standard/Premium Licensing, you will require the add-on 'Microsoft 365 Business Voice without Calling Plan' for each user who requires voice calling. Option 2 If your business has Microsoft/Office 365 E1/E3 Licensing, you will require the add-on 'Microsoft 365 Phone System' for each user who requires voice calling. Option 3 If your business has Microsoft/Office 365 E5 you already have access to the Microsoft Phone System.
CO-ITSM-BV	Toll Free Numbers: To use toll free numbers, "Communication Credits" are required to purchase. Toll-free calls are billed per minute and require a positive Communication Credits balance. Initial purchase of Communication Credits requires a minimum spend, and can be topped up automatically via credit card or other purchasing agreement. Communication Credits cannot be purchased via CSP, and must be purchased through the Office 365 portal directly

8. Access Requirements

Requirements Item
Administrative (Local) access to all assets in scope as required for remediation actions

Related Documents

Supporting documents for this service:

Any clients onboarding to Calligo will require the following document as an introduction to service

[Calligo – Welcome to Support for Clients](#)

12. Optional Services

In addition to the Business Voice service, Calligo can provide the following service items as optional add on services for Business Voice:

Service Item	Service Item Reference	Description
M365 Business Voice	CO-ITSM-BV	This service provides support for Teams Business Voice for Cloud PBX or related PSTN services.
M365 Applications	CO-ITSM-M365APP	This service provides M365 application support and patching activities via tooling or M365 Portal and Servicing Channels
Onsite Support	CO-ITSM-ONSITE	As required on-site support for in-scope hardware as defined by the required service item(s).
Licensing	CO-SW-LICENCE	Calligo's Licencing Service provides Application, OS and Appliance licensing procurement as well as Provisioning and Management of service subscriptions. Reporting of license usage as well as monthly Invoicing provides detailed status of all current client licensing.
365 User Protected User	CO-BAAS-365USER	Calligo's M365 Application and data level backups provides data assurance for all supported M365 applications.

Service Delivery Manager	CO-ITSM-SDM	The Service Delivery Manager will be responsible for the business as usual and account management relationship. This will include service reviews, point of escalation, responsible for Information Technology Infrastructure Library (ITIL) practice adherence, interfacing with third-party suppliers also participating under the customer's Service Integration and Management model and ensuring that Calligo meets or exceeds Service Level Objective (SLO) targets.
Technical Account Manager	CO-ITSM-TAM	The Technical Account Manager will be responsible for the technical collaboration between the customer and Calligo support teams and will play a key role in technical service improvement, managing deployment of new services or configuration changes, ensuring optimal performance and uptime of the application stack, and interfacing with third-party suppliers as required under the customer's support model.

13. Auxiliary Services

1.4.3. Service Onboarding & Transition

To launch Business Voice service successfully, service design, onboarding and transition will be required to prepare and test both the environment and the managed services processes. Calligo will undertake several workshops to discuss and confirm each element of the service to ensure all parties are aware of roles and responsibilities in advance of service launch.

Service transition and onboarding covers areas such as ticket management setup, platform readiness with knowledge share, and finalising all ITIL practices. A test and acceptance criteria are captured and signed off, to allow for the Business Voice service to commence.

After service launch, Calligo uses a formal service transition framework as the basis to carry out acceptance into service procedures, for new services landing into managed services. We typically engage at the initial stages of a project to ensure service operation adoption and readiness is planned and carried out correctly. This materializes as follows:

- To review designs, build and test artefacts to ensure supportability.
- Attend change review boards to gain early sight of changes by way of knowledge acquisition.
- To witness and validate designs and builds are delivered as proposed and intended.
- Complete operational into service documentation, training, and runbook enablement, which is required as part of the service hand-over.

1.4.4. Change Request and Change Control Process:

All infrastructure changes introducing risk to the environment will require change control which includes, but not limited to, Microsoft Security Patching, Infrastructure Upgrades, Deployments, Configuration Item status change. This can be generated from maintenance or an event such as an upgrade required on the system released by Third Party vendors, requested by the customer, or from a monthly release of security patches.

Where possible Standard Changes will be used with minimal risk, repeatable implementation steps, and prior approval from the customer in the form of an email.

An Emergency, or unplanned, change process will be raised to resolve a Priority 1 or 2 incident or to implement an emergency Security Patch. This accelerates the time to implement and resolve.

All Requests for Change will be reviewed internally, assessed internally and authorized or rejected through Calligo ITSM tool.

1.4.5. Superseded patch scenarios

This relates to the behavior which occurs when a newer update is released after the patch cycle has started:

- **Revisions** - When a metadata only revision to an update is made, the update identified in the deployment is still installed. There is no new update released by the vendor for this. Updates with material changes (binaries) are considered superseded updates and the supersede rule applies.
- **Supersede** - When the update source marks an included patch as superseded, the superseded update will not be installed. The newer update will need to be included at a future patch cycle.
- **Expiration** - At the time of installation, when a patch has been included for installation but is marked as expired by Windows Update, the install of that patch will not occur. The asset will report compliant since the patch no longer meets the requirements to install. Where a newer update becomes available it will need to be included on a future patch cycle.
