Use of Artificial Intelligence

Calligo uses artificial intelligence and AI-assisted tools to support parts of our work, including research, analysis, drafting, editing, and the creation or enhancement of visual content.

AI supports our people; it does not replace their professional judgment, editorial responsibility, or our accountability to clients. Content we publish is reviewed by our people before release, and Calligo remains responsible for it.

We use AI tools in line with our internal AI governance, which sets out which tools may be used, for what purposes, and how information, including client and personal data, must be protected. We do not permit client data to be used to train third-party AI models.

Where you interact directly with an AI-powered feature, or where AI-generated or manipulated content requires specific disclosure, we will identify it clearly at the point of use. Commitments relating to AI in the delivery of our services are set out in the relevant service and contractual documentation.

Our Privacy Policy explains how we collect, use and protect personal information. Questions about our use of AI can be sent to privacy@calligo.io

This statement is provided for transparency, does not form part of Calligo's contractual terms or service documentation, and may be updated from time to time.
